

In re Patent Application of:
Concilio
Serial No. 10/725,193
Filed: December 1, 2003

REMARKS

The Applicant's Admitted Prior Art discloses a framework that executes a central module of an application, having a central module and a complementary module, based upon an external event. The central module executes the complementary module based upon a routine call or a conventional programming interface invocation.

In sharp contrast, independent Claim 16 recites that after at least beginning execution of the central module by the framework based upon an external event, generating a new set of internal events by the framework for managing the at least one complementary module. The Applicant's Admitted Prior Art does not disclose this claimed feature; rather, the central module, not the framework, of the Applicant's Admitted Prior Art begins execution of the complementary module by a routine call or a conventional programming interface invocation.

Applicants contend that the present case is in condition for allowance and respectfully requests that the Examiner issue a Notice of Allowance and Issue Fee Due. If the Examiner has any questions or suggestions for placing this case in condition for allowance, the undersigned attorney would appreciate a telephone call.
